Five years warranty for control box

PK

Mechanical Machine

high cost

Clutch motor Spare parts Bearings Pulley & Belt

1 Direct drive integration, Intelligence

2 Power saving and high efficiency

Increase the capacitance to make the machine more stable and reliable when faced with frequent switching of high and low voltage; wide voltage—220V: 100V~295V; 110V: 50V~145V

3 Easy and smart panel

One key to speed adjusting, needle positioning and reset.

Power saving leader

- 1.Machine running-in test: 500 hours.
- 2.Control box switch test: 30,000 times.
- 3.LED light switch test: 5 million times.
- 4.Voltage range test: 110V-295Vfor 200 hours.
- 5.Machine high & low temperature test: -20℃-50℃ 500 hours.
- 6.Lightning Test: 3000V.
